EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jason H. Rosenblum on July 14, 2010.

The application has been amended as follows:

- a. **Cancel claim 303.**
 - b. **Claim 25, line 5: change "griping" to --gripping--.**
 - c. **Claim 304, line 4: change "griping" to --gripping--.**
 - d. **Claim 306, line 4: change "griping" to --gripping--.**
2. The following is an examiner's statement of reasons for allowance:
- e. The prior art does not teach or fairly suggest a method or device for treating unwanted hair by transmitting acoustic waves at a frequency of from about 150 kHz to about 1300 kHz through the hair so as to generate heat that is sufficient to damage or destroy the follicle, dermal papilla, hair bulge, and/or the germinal matrix as claimed in independent claim 1. The closest prior art WO 00/21612 to Iger teaches two different modes of operation for hair removal. The mode that is analogous with applicants is where the hair is used as the wave guide. However, Iger teaches that the frequency needed is much higher than the range which applicant is teaching. Iger teaches that for that mode of operation

the frequency should be 5 MHz. The prior art, also, does not teach or fairly suggest a wave condenser for gripping the hair to establish acoustic coupling between the acoustic waves and the hair as in claim 304. The closest prior art to Iger teaches a transducer or acoustic horn that grasps the hair in a similar manner to tweezers. Similarly, the prior art does not teach or fairly suggest a method or device in which at least one of a frequency, a power density and a duration of transmission of acoustic waves is selected such that a characteristic amplitude of longitudinal vibrations of the hair is below 10 μ m. The prior art teaches that vibration is useful in the removal of unwanted hair and this characteristic is not minimized in the context of the prior art. In fact, vibration as caused by the transmission of acoustic waves is often the mode of hair removal.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAITLYN E. HELLING whose telephone number is (571)270-5845. The examiner can normally be reached on Monday - Friday 9:00 a.m. to 5:30 p.m. EDT.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda C.M. Dvorak can be reached on (571)272-4764. The fax phone
